The L3 Edit Pass PhL 5.18.13

I now realize that back in 2003, when I was consulting for L3 and reading Lee-Messer and Sklar, I did a lot of editing on my 1991 spectral theory document. The results of that editing are in this folder! This matches what exists in the Spectral had copy binder.

I was unaware of these edits when I did the big final PDF for release. Today I just paged through the hard copy and I see references to things like "spectrum for QAM" and so on. I was adding modulation ideas into the thing, whereas what I released is entirely "baseband" and that is what it should be. I found a few things I could consider adding to the big thing, like initial and final value theorem, but I have just lost interest in adding anything new at this point! It is done!
