Loss of Wedge Folder PhL 8.29.15

I just created a wedge folder on the desktop, but docs and pdfs into it, and then in vanished.
Search on wedge shows nothing on C or D drive.

For example, I have a doc called "wedge questions.doc" because I see shortcuts to such a file. But this file does not exist on C or D drive.

Somehow with bad control key action I deleted my Wedge folder and everything in it and also emptied the trash. I didn't know that was possible.

I will now recover from backup. But the search in Cubic does not work.

Search backup_of_d for: doc created after 8/1/15 for example

I recovered the files from backup_of_phil/Desktop! Think I am back now.
