Maple Index PhL 3.6.16

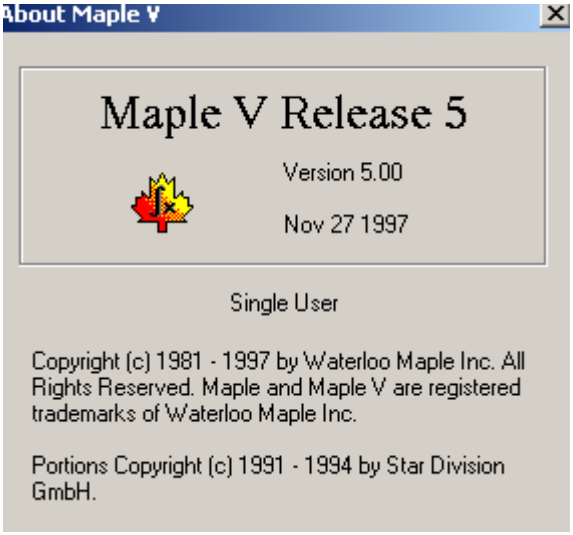

This index was compiled for Andrzej Icha on 6 March 2016 and code was tested on Maple V Release 5. See below regarding Maple.
These *.mws files have some extra junk in them. Each >restart line starts a new piece of code.

page 50	coriolis.mws	blue circle plot	tested
page 64	tides1.mws	numbers	
page 65	tides1.mws	numbers	
pages 109-127	ant spirals.mws	Figs 15.3-10, 15.12-14 15.16-17, p127	tested
page 130	coriolis.mws		tested
page 132	coriolis.mws		tested
page 155	no code		
Fig D.4	no code		
page 160	no code		
App A	spher example.mws		tested

Files to send

coriolis.mws
tides1.mws
ant spirals.mws
spher example.mws

This is what I tested the above code on:

Later versions of Maple may need to convert .mws files to .mw files (I have never done it) :

Worksheet Migration Assistant

The Worksheet Migration Assistant enables you to convert a large collection of worksheets that have been written in **.mws** format (Classic Maple) into **.mw** format (Standard Maple) at once.

To convert .mws files to .mw files using the assistant:

1. From the **Tools** menu, select **Assistants**, and then **Worksheet Migration**. The **Worksheet Migration Assistant** dialog opens.
2. Choose between **Scan a specified folder for .mws files** (default) and **Read a list of .mws files from a .txt file** to determine how Maple should search for the **.mws** files to be translated. If you choose to use a **.txt** file, it should contain the path names of all files to be translated.
3. Enter the path to the source folder, or browse to the correct folder. You can scan the selected folder plus all sub-folders for **.mws** files. If you only wish to scan the folder selected, clear the check box beside **Scan sub-folders**.
4. Enter the path to the destination folder for the new **.mw** files, or browse to the desired folder.
5. Choose between converting the files to **.mw** format only, or converting the files and translating 1-D input into 2-D input (default).
6. Click **Start Translation**.
